

Well done!

In this next task, you will see a circle with a rotating arm moving around it.

Your task is to **tap** at a moment of your **own choosing**, but before the rotating arm reaches the end of its path.

There is no correct moment to tap — just make sure you tap **before the arm reaches the end**.

The trial will start with a '3-2-1' signal. Press the button below when you're ready to begin.

I'm ready
